The contents of this specification may change without prior notice. For inquiries, please refer to product name, model No., and control No. written in the cover sheet of this specification. Because this specification is for reference only, for your actual use of this part please acknowledge and sign the formal specification for this part.

## 1. Scope

This specification applies to 3 mm Chip trimmer potentiometer with Metal - Glaze - Resistor, used in electronic equipment.

## 2. Construction (Dimensions and Materials) and Rating

2.1. Dimension See attached Drawing.

2.2. Materials See attached Material List

2.3. Operating Temperature Range -40 ~ +100

2.4. Storage Temperature Range -10 ~ +40

2.5. Nominal Total Resistance Range 100  $\Omega$  ~ 1 M $\Omega$   
(1  $\cdot$  2  $\cdot$  3  $\cdot$  5 series, see attached Application List)

2.6. Total Resistance Tolerance  $\pm 25\%$

2.7. Power Rating 0.15 W (~ +70 )  
Power rating vs. ambient temperature shall be denoted on the following chart.

2.8. Rated Voltage Rated Voltage  $E = \sqrt{P \cdot R}$

Where P : Power Rating (W)

R : Nominal Total Resistance ( $\Omega$ )

When the rated voltage exceeds the maximum operating voltage, the maximum operating voltage shall be the rated voltage.

2.9. Maximum Operating Voltage 50 V

### 3. Characteristics

#### Standard atmospheric conditions

Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests is as follows :

Ambient temperature : 5 to 35

Relative humidity : 45 % to 85 %

Air pressure : 860 hPa to 1 060 hPa

If there is any doubt about the results, measurements shall be made within the following limits :

Ambient temperature : 20 ± 2

Relative humidity : 60 % to 70 %

Air pressure : 860 hPa to 1 060 hPa

#### 3.1. Mechanical characteristics

|   | Item                      | Conditions                                                                                                                                                                        | Specifications                                                         |
|---|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 1 | Total Mechanical Rotation |                                                                                                                                                                                   | 270 ° ± 20 °                                                           |
| 2 | Rotational Torque         |                                                                                                                                                                                   | 0.98 mN·m ~ 11.76 mN·m                                                 |
| 3 | End Stop Strength         | The following torsion moment of 14.7 mN·m shall be applied to the spindle for 5 seconds in any direction.                                                                         | Without distinct looseness or poor contact.                            |
| 4 | Soldering Strength        | A static load shown in this figure shall be applied to terminals for 30 s after soldering.<br> | Without distinct looseness or poor contact.                            |
| 5 | Push Load                 | A push load of 9.8 N shall be applied to the axial direction for 30 seconds from upper part of the product.                                                                       | Without distinct looseness or poor contact.<br>Without board breaking. |

### 3.3. Endurance characteristics

When the items in mark, the moving contact shall be rotated to a point where the resistance between 1 and 2 is half of the total resistance.

| Item | Conditions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Specifications                                                                                                                             |             |          |   |              |        |   |                                 |                  |   |             |        |   |                                 |                  |                                                                                                                                     |

## 5. The others

### 5.1. Preset Position

The moving contact set half position of total rotation angle (50 % ± 15 % of total rotation angle) on delivery.

### 5.2. Application Notes

- The soldering for this product should be reflow soldering. Please note that this product is not applicable to flow soldering.
- Be careful with flying flux in soldering.
- If flux was stuck on the resistance, please wash it out thoroughly by alcoholic solvent.
- Handle the trimmer potentiometer with care.
- This product is not what meant the use to affect the human body life which needs advanced safety and reliability, and the use of nuclear relation, and carried out design manufacture.
- Please refer to EIAJ RCR-2191A "notes guideline(safe application guide of a potentiometer) of the potentiometer for electric devices" about notes on other use.
- In a case where there is a wiring pattern right under this product after mounting.  
Please be sure to do some insulation measures on the pattern with a resist or some other materials.

### 5.3. The wish matter of the consideration to the safety of a product

Although we are exerting our best effects to maintain the quality of this product, we cannot guarantee that they will never cause short circuiting and open circuitry.

Therefore, when designing an equipment or device with which the priority is given to the safety, you will please carefully study the influences to the whole equipment of a single function failure of potentiometer in advance to make out a fail-safe design providing.

### 5.4. Industrial Proprietorship

If the trouble on industrial proprietorship (related on delivered product s design and production) happens, we solves it on own responsibility.

### 5.5. Nation of products

Label description

PART No. : Per customer's directions  
VALUE : Indication of the resistance value (Ex. 100)

QUANTITY : Label for the reel  
LEADLESS SOLDER : "RoHS"  
Date : Indication of taping date(Ex. 02.4.18)  
Lot.No. : Indication of HDK manufacturing lot No.(Ex. Q-16-5-1)

Packaging Specification

|             | Number of the reels put in | Total Quantity of the products |
|-------------|----------------------------|--------------------------------|
| Inner box A | A max of 2 reels           | 5 000 pcs. max.                |
| Inner box B | A max of 6 reels           | 15 000 pcs. max.               |

|             | Number of the reels put in | Total Quantity of the products | Size (W*L*H)<br>(Unit : mm) |
|-------------|----------------------------|--------------------------------|-----------------------------|
| Outer box a | A max of 6 reels           | 15 000 pcs.max.                | 290*210*90                  |
| Outer box b | A max of 12 reels          | 30 000 pcs.max.                | 505*210*90                  |
| Outer box c | A max of 24 reels          | 60 000 pcs.max.                | 400*220*180                 |
| Outer box d | A max of 48 reels          | 120 000 pcs.max.               | 400*220*330                 |
| Outer box e | A max of 30 reels          | 75 000 pcs.max.                | 390*210*225                 |

- Note 1- Glue the label on the reel (The gluing position is per the drawing.)
- Note 2- Cushion material is to be put in to fill the empty space when the number of the reels in an inner box does not reach 2 or 6 respectively.
- Note 3- Cushion material is to be put in to fill the empty space when the total quantity in the outer box does not reach 15 000 , 30 000 , 60 000, 75 000, or 120 000 pcs. respectively.
- Note 4- Type name, resistance value and quantity shall be written on a inner box.

Example : VG039NCHXT  
B 1 k ohm  
15 000

|                                              |                 |                                               |            |              |                            |                        |      |
